The NIBIB at the NIH awarded our Open Connectome Team (R. Burns, Greg Hager, Misha Kazhdan, Joshua Vogelstein, R. Jacob Vogelstein at JHU and Jeff Lichtman at Harvard) a Collaborative Research in Computational Neuroscience (CRCNS) grant entitled "Data Sharing: The EM Open Connectome Project." The goal of project is to deliver an end-to-end high-throughput analysis engine for electron microscopy neuroimaging that we will use to process and host public data sets. Notably, this make me a new principal investigator with the NIH. I'm barely reducing the average age of first time R01 PIs. The average is an astonishing 42 years old.
